## Q-845 Q-Motion ${ }^{\circledR}$ SpaceFAB

## High Precision and High Stiffness

Top view of the Q-845.140, dimensions in mm. The reference position corresponds to the center position of all axes.

- Six degrees of freedom

■ $\pm 7 \mathrm{~mm}$ travel range in X and Y , and $\pm 5 \mathrm{~mm}$ in Z

- $\pm 7^{\circ}$ rotation range in $\theta_{x}, \theta_{y}$, and $\pm 8^{\circ}$ in $\theta_{z}$
- 10 N load capacity, center mounted
- Self-locking, no heat generation at rest
- Crossed roller guides, anti-creep
- Vacuum-compatible to $10^{-6} \mathrm{hPa}$

    * The travel ranges of the individual coordinates ( $X, Y, Z, \theta_{X}, \theta_{Y}, \theta_{Z}$ ) are interdependent.

    The data for each axis in this table shows its maximum travel range, where all other axes and the pivot point are at the reference position.
    For operation in a vacuum, we recommend a reduced duty cycle of $20 \%$ and a maximum motor push / pull force of $30 \%$ compared to a standard environment. The intrinsic mass of the slider plate must be considered accordingly.
